SUMMARY

Technical program manager who led the ground-up relaunch of a live broker-dealer - coordinating six internal and external teams (internal engineering, an external creative agency, an OMS vendor, a charting/API partner, and clearing firms) from kickoff to launch. Economics background, hands-on with AI/LLM tools, and startup experience building an operation from scratch. Brings structure to unclear, cross-team projects and drives them to launch.

CORE COMPETENCIES

Cross-functional program management · Vendor & stakeholder coordination · Launch & dependency management · Technical/API integration · AI-LLM implementation & agentic workflows · Process & playbook design · Fintech domain (broker-dealer, OMS, clearing) · FINRA-aware content

EXPERIENCE

Technical Program Manager - Nitro Trading Systems Remote / Atlanta · Nov 2023-Present

Led the end-to-end relaunch of Investrade, a Regal Securities broker-dealer - owning coordination and delivery across engineering, product, vendors, and go-to-market.

- Drove a ~2.5-year platform relaunch to live launch in 2026, coordinating across six groups with competing priorities: Regal Securities senior stakeholders, Regal's internal dev team, Forefront (external creative/marketing agency), ETNA (external OMS developer), TradingView (API trading integration partner), and clearing firms
- Managed the technical program to revamp two of the broker-dealer's trading platforms across mobile, desktop, and web - sequencing work, tracking dependencies, and keeping external vendors aligned to a single launch plan
- Owned the TradingView API trading integration end to end, working directly with TradingView and coordinating with the ETNA order-management system and clearing firms to connect charting, order routing, and settlement
- Designed the account-opening and onboarding experience, including a 16-dimension competitor analysis (Robinhood, Webull, Schwab) that informed a streamlined Live/Demo flow
- Built the go-to-market creative engine: App Store + Play Store creative sets, multi-stage Live and Paper-trading email journeys, and a Knowledge Center / training portal
- Stood up a FINRA-aware, compliance-reviewed content pipeline and packaged compliance deliverables
- Architected AI automation (Claude Code agentic workflows) that produces recurring executive reporting, creative, and content - collapsing hours of manual work into repeatable pipelines

Founder & Operator - C&L Resident Services Atlanta · 2022-2024

- Co-founded and ran all operations of a residential service company for ~18 months - built it from zero to a hiring, scheduling operation delivering everything from junk removal to large hardscaping jobs
- Owned team hiring, job scheduling, and delivery logistics; built the financial model and led the team

SELECTED PROJECTS

- Personal Agentic AI Operating System - a Claude Code environment (custom skills, automation hooks, persistent memory, notifications) that runs recurring professional deliverables end to end
- Investrade TradingView Integration - API trading integration connecting charting, an external OMS, and clearing into a live broker-dealer platform

EDUCATION

B.B.A., Economics - University of Georgia, Terry College of Business · Jan 2024 · HOPE Scholarship · Dean's List · Terry FinTech Society

ADDITIONAL

Eagle Scout · 6+ years active markets & options experience (the entry point into fintech)
